Implementation and Demo: Team Assignment 3
Buy Bitcoin
October 26, 2017

During our meeting with Yu, we showed him our progress with our product (hosted on heroku at trading-stuff.herokuapp.com).
We were able to successfully demo:
- the flow of our application, whereby the user logs in through google
- linking of a bank account via Plaid
- displaying of several application related features (Investment Bucket, finance graph, finance overview)
- Modification of stock bucket composition
- Editing supplementary information of stock buckets

Since this was only the first iteration, not all buttons on screen were functional, which we expected. Overall we displayed good progress and Yu encouraged us to continue the work we had done so far.
